PRODUCT MANUAL

OUR MISSION

According to relevant researches, people around the world are changing their way to eat, such as eating more various of food, in more places, and in more ways than before. And all we mentioned above is actually bringing us a great numbers of challenges and chances.

Under this circumstances, Easy Green, named after the goal that we go green in an easy way, was created in 2009 as an eco-friendly packaging company and quickly earned reputation in international market. We aim to offer proper package for 252(love what I love) kinds of different foods. Not only do we want to make food look great, but also we want to keep it safe and sustainable too.

Today, we continue to uphold the same mission to be of service to customers and consumers in all that we do. We carry this in our business operations to address sustainability in our products and practices.

Just For Good Food

OUR HISTORY

In 2003: Our group fully made use of the synergy advantages from local relevant industries to build the first thermoforming plant in Foshan, Guangdong, a city famous for manufacturing. With reasonable price, good quality and updated design, our main product- disposable tableware, quickly won the reputation from domestic & international market and customer's satisfaction & trust .

In 2009:With accumulative of clients, aggregation of production experience and increased demands of disposable tableware, we realized the importance of having a own-brand. To make the dream of “offering healthy and disposable packaging solutions to 252 kinds of food” come true & encourage people to go green in an easy way, our team established the brand “Easy green”.Soon afterwards, a sales service center had been set up in Foshan, where next to Guangzhou port and Shenzhen port, to offer customers better and timely service. In the same year, our group invested heavily in setting up a second thermoforming factory in Taiwan with high-level facilities, exquisite workmanship and full process production lines.

In 2012:In order to meet the rapidly increased needs of product packaging, we invested in a carton packaging factory during 2012. Stable production capacity and high-quality service are the bottom line that we have always adhered to.

In 2014:Since market share increasing, our group set up the first injection molding factory in Taichung and the product category has been greatly expanded.

In 2015: As the life pace is getting faster, a more convenient life would be expected. We believe the market demand for disposable tableware will keep going up. Thus, the group established a third thermoforming factory in Kunshan, Zhejiang (adjacent to Shanghai port).

In 2016: Time goes by, we realized the urgency of environmental protection. Bagasse, a waste product from sugarcane that can be 100% biodegraded, came into our vision. Therefore, the first plant for bagasse tableware, which is also a meaningful milestone for our group, has been founded in Taiwan.

In 2018: Our strategic investment of bagasse production turned out to be correct & successful. To improve production capacity, the second bagasse plant has been founded in Foshan, Guangdong.

In 2020: During 2020, the 1st paper production plant started running in Zhejiang, which greatly enhance our products categories. Besides, by adopting imported food-grade kraft paper as raw material, paper products got advantages as: light, environment-friendly and degradable.
